

I claim:

1. A apparatus for wrapping an article with flexible material comprising: a base mounted for rolling; a post extending upwardly from said base; a winch mounted to said post; and supporting means for a roll of flexible material, said supporting means being operatively connected to said winch and being raised and lowered thereby.
2. The apparatus as claimed in claim 1 wherein said supporting means includes a bed and a tube which extends upwardly from said bed, said roll of flexible material being adapted to be seated upon said bed and to surround and to revolve around said tube.
3. The apparatus as claimed in claim 1 further including a handle connected to said base for facilitating the movement of said base.
4. The apparatus as claimed in claim 1 wherein said post is extendible such that the level of said winch can be adjusted.
5. The apparatus as claimed in claimed in claim 2 wherein said winch includes a cable which is connected to said tube
